

MetroNet Begins Constructing 100% Fiber Optic Network in Sugar Grove

EVANSVILLE, Ind. (August 2018) - MetroNet, a cutting-edge telecommunications service provider, began construction of their multimillion-dollar 100% fiber optic network in Sugar Grove, IL in early August.

MetroNet construction teams are working throughout the village placing fiber underground and on utility poles. As segments of the network are completed, MetroNet will offer Internet speeds of up to one Gigabit per second and interactive fiber TV service with incredible picture quality, plus feature-rich and reliable fiber phone service: all at affordable prices. MetroNet also plans to offer a full suite of business communications services ranging from scalable-hosted PBX phone solutions for small and medium-size businesses all the way up to customized network services tailored to the specific needs of larger companies.

MetroNet Executive Vice President and General Manager Kevin Stelmach said customer enthusiasm for MetroNet's direct connection to fiber optic services is driving the company's expansion in the region. "Customers are looking for ways to eliminate slow-downs and buffering. Much of the population is now streaming content—or exploring the possibilities—making our fiber optic Internet speeds a perfect match," Stelmach said.

Prior to starting construction work in area neighborhoods, residents will receive a letter with company contact information and an explanation of what to expect during construction. Next, residents will receive a postcard reminder, followed by informational yard signs indicating construction is on the way. MetroNet has a dedicated construction website at www.metronetinc.com/construction where residents can view construction areas, watch a video detailing the construction process, and submit questions.

Residents are encouraged to sign up early for MetroNet services by visiting www.metronetinc.com and clicking "Order Now". Those who sign up early will receive periodic updates about construction progress, and will be at the front of the line to schedule service installation once it is available in their neighborhood.

About MetroNet

MetroNet delivers the latest in high-speed fiber internet, television, and phone service over its 100% fiber optic network. Headquartered in Evansville, Ind. and serving more than 50 communities in Indiana, Illinois, and Kentucky, MetroNet provides fiber-to-the-premise (FTTP) technology to homes and businesses within its footprint giving its customers state-of-the-art quality, speed and reliability.
